Starting Point

Block Face where alcohol sales would be prohibited (300' from starting point)

This exhibit demonstrates the potential impact of a school on the ability of nearby properties to sell alcohol based on the measurements in the Texas Alcoholic Beverage Code. Actual measurements will depend on the location of front doors of the school and other establishments.

## Option 2

The school shall

- provide pick-up and drop-off service as identified in Option 2. If queuing routinely blocks the flow of traffic, the City Engineer may require an alternative plan such as Option 1.
- provide bus routes with at least two buses.
- provide a minimum of two crossing guards.
- stagger start times in order to minimize peak traffic flows.
